

Shunri Oda

Shunri Oda received the B. Sc degree in physics, the M. Eng. and Dr. Eng. degree from Tokyo Institute of Technology in 1974, 1976 and 1979, respectively.

He is a Professor in Department of Physical Electronics and Quantum Nanoelectronics Research Center, Tokyo Institute of Technology. His current research interests include fabrication of silicon quantum dots by pulsed plasma processes, single electron tunneling devices based on nanocrystalline silicon, ballistic transport in silicon nanodevices, silicon based photonic devices, and high-k gate oxide ultrathin films prepared by atomic layer MOCVD. He has authored approximately 200 international technical and more than 230 conference papers including more than 70 invited papers. He edited a book (with D. Ferry) “Silicon Nanoelectronics” (CRC Press, 2006).

Prof. Oda is a member of Electrochemical Society, Materials Research Society, and a Fellow of Japan Society for Applied Physics. He is a Distinguished Lecturer of IEEE Electron Devices Society.
